## Location Report Web Pages

Issue (244): Location Report: make it so you can expand and collapse the location pop up

1. Location report page with the **marker before it gets expanded**

Updated

2. Location report page after the **marker is clicked**

- Location pin active so that clicking on it opens the rating window (rating will display in alphabetic order) beside the map. (Map area reduced)
- Clicking on the close button, closes the rating info window and expands the map.
- Clicking on the location pin again display the rating info box again as shown above.

3. Location report page when user is **not logged in and "Personal"** is opened.

- Clicking on the close button, closes the rating info window and expands the map.
